

COMP3851 – Computer & IS Work Integrated Learning Part A
Minutes of Meeting
Week 1 – Meeting 2: Follow-up Meeting

Team: 1

Place: PSB Academy Date/Time: 14/5/2026 930-1130 AM

In attendance

Kaung Sett Paing Tun – C3546060

Alas Elizabeth Louise Flores - C3546059

Berezovik Daniil – C3543315

Krish Longwani – C3549511

Hein Myat Thu – C3552370

Apologies

Agenda

- Confirm team roles and responsibilities
- Set up project task tracking using a Kanban/Scrum board
- Create shared folder for project documents and reports
- Create GitHub repository for front-end and back-end coding files
- Review initial tasks assigned on the Notion Kanban board
- Discuss early technical setup for Llama 3.1, PDF parsing, React/Vite, Python API, user authentication, and database storage
- Discuss documentation tasks including Gantt chart, meeting minutes, pre-project plan, formatting, and report consistency

Action sheet

Task	Responsible	Due	Notes / Expected Output
Create SharePoint project folder	Elizabeth	Completed	Set up shared folder for reports, meeting minutes, templates, research, and project documents
Create GitHub repository	Krish	Completed	Repository created with separate front-end and back-end folders for coding files

Create Notion Kanban/Scrum board	Krish	Completed / Ongoing	Board created with To-Do, In Progress, and Done sections
Submit Week 1 meeting minutes	Elizabeth	Completed	Meeting minutes submitted and moved to Done on the Kanban board
Draft Assessment 1 template in UON style	Elizabeth	In progress	Prepare the project plan document structure using the required template
Draft user consent paragraph	Elizabeth	In progress	Prepare wording for responsible AI use, user consent, and uploaded materials
Manage Gantt chart and documentation format	Elizabeth	Ongoing	Ensure project documents, reports, and formatting remain consistent
Install and run Llama 3.1 locally via Docker	Krish	To be confirmed	Explore Llama 3.1 setup for the AI smart chat feature
Build PDF text extractor script	Krish	To be confirmed	Use PyPDF2 or pdfplumber to extract text from uploaded PDF notes
Initialize React/Vite environment	Daniil	To be confirmed	Set up the front-end development environment
Wireframe file upload UI	Daniil	To be confirmed	Create early design for the file upload interface
Set up Python API boilerplate	Hein	To be confirmed	Prepare initial back-end API structure for the project
Build file upload API route	Hein	To be confirmed	Create back-end route for handling uploaded files
Design database schema	Paing	To be confirmed	Plan database tables or structure for users, files, chat history, roles, and permissions
Research vector databases	Paing	To be confirmed	Explore possible vector database options for storing and retrieving note content
Review assigned tasks on Notion board	All members	Before next meeting	Check task status and update progress regularly

Confirm Flask or FastAPI for back-end	All members	Next meeting	Clarify final Python back-end framework before development continues
