

COMP3851 – Computer & IS Work Integrated Learning Part A
Minutes of Meeting
Week 2 Meeting 3 - First Project Sponsor Meeting

Team: 1

Place: PSB Academy Date/Time: 19/5/2026 12-1 PM

In attendance

Kaung Sett Paing Tun – C3546060

Alas Elizabeth Louise Flores - C3546059

Berezovik Daniil – C3543315

Krish Longwani – C3549511

Hein Myat Thu – C3552370

Apologies

Agenda

- Meet the project sponsors for the first time
- Clarify expectations for Part A and Part B
- Understand the main purpose and direction of the Newcastle Smart Peer Companion project
- Discuss the concept of a peer-to-peer study chat platform with AI assistance
- Clarify the importance of design, requirements, validation, and data gathering for Part A
- Discuss research tasks, including existing AI tools and peer collaboration literature
- Identify next tasks for the team

Key Points Discussed

The supervisors confirmed that **Part A** for this trimester will mainly focus on **design, requirements, research, validation, and planning**. The heavier coding and development work will mainly be carried out in **Part B**.

The team clarified the project direction as a **peer-to-peer study chat platform**, similar to a “Discord for Study.” The platform should encourage students to collaborate with peers while having the option to call on AI assistance when needed.

The AI should not constantly monitor or “spy” on students. Instead, students should be able to summon the AI when the group needs help, such as when reading PDFs, understanding difficult concepts, or clarifying study materials.

The supervisors highlighted that the project should focus on encouraging **peer collaboration with AI assistance**, rather than building a simple AI study helper. The team should investigate how existing AI tools are currently used and how the proposed platform can offer a more collaborative learning experience.

The supervisors also advised the team to conduct literature reviews on **peer collaboration, collaborative learning, and AI-assisted learning**. Each team member is expected to read at least two articles and present their findings.

The supervisors mentioned that **data gathering is a top priority** at this stage. The team needs to collect evidence to support why students would need this application. A student sentiment survey will be prepared to help validate the project idea.

Action sheet

Task	Responsible	Due	Notes / Expected Output
Prepare kickoff meeting minutes	Elizabeth	Today	Finalise and upload the first sponsor meeting minutes
Start mapping the Gantt Chart for the trimester	Elizabeth	This week	Create an initial timeline for Part A activities
Read at least 2 articles	All members	Before next meeting	Articles should relate to peer collaboration, collaborative learning, AI-assisted learning, or existing AI study tools
Present article findings	All members	Next meeting	Share short summary of findings with the group
Research UI designs for chat-based platforms	Daniil and Paing	This week	Look at Discord, Slack, MS Teams, and how they can be adapted for studying
Start Figma design exploration	Daniil and Paing	This week	Begin early UI ideas for the study chat platform
Write Student Sentiment Survey	Krish and Hein	This week	Prepare survey questions to gather student opinions and validate the need for the app
Investigate existing AI tools	All members	This week	Explore tools such as Meta AI and other available AI assistants
Update Notion Kanban board	Krish / All members	Ongoing	Add new sponsor meeting tasks and update progress
Continue SharePoint	Elizabeth	Ongoing	Store meeting minutes, reports, research notes, Gantt chart, and project documents

document organisation			
--------------------------	--	--	--

Decisions / Confirmations

Item	Decision / Confirmation
Part A focus	Design, requirements, validation, research, and planning
Part B focus	Heavier coding and implementation
Project concept	“Discord for Study” with AI assistance
AI role	AI is summoned when needed, not constantly monitoring users
Research direction	Existing AI tools and literature on peer collaboration
Data gathering	Student sentiment survey is a priority
UI direction	Explore chat-based platforms such as Discord, Slack, and MS Teams
Documentation	Elizabeth will prepare meeting minutes and begin Gantt Chart planning

Next Meeting Focus

- Review article findings from each member
- Review draft Student Sentiment Survey
- Review early Figma/UI research
- Review initial Gantt Chart
- Confirm key requirements for the Project Charter and Project Plan
